PROFILE

Computer Science graduate with backend development experience from a six-month internship at Wema Bank and academic projects. Built ASP.NET Core APIs, JWT authentication, role-based access control, and relational database schemas. Developed an offline-first attendance system using FastAPI and SQLite/Drift. Seeking a graduate or junior backend role focused on C#/.NET.

EXPERIENCE

NYSC Corps Member Present
Outspan Nigeria Limited
Currently serving in the Monitoring and Evaluation department as part of the NYSC Place of Primary Assignment (PPA).

Backend Developer (SIWES Internship) 01/2025 – 06/2025
Wema Bank Plc Lagos
- Built ASP.NET Core backend modules for an Internship Management System covering intern, supervisor, department, and attendance workflows.
- Implemented JWT authentication and role-based access control for different user groups.
- Designed relational database schemas and developed attendance tracking and department capacity management logic.
- Collaborated in an Agile team, participating in bi-weekly sprint meetings to deliver project requirements.

Software Engineer Intern 07/2022 – 09/2022
Kallo Lagos
Researched and documented a new software feature, supported testing and feature validation, and contributed to deployment activities.

EDUCATION

B.Sc. Computer Science 10/2022 – 07/2026
Babcock University Ogun State, Nigeria
CGPA: 4.39/5.00

TECHNICAL SKILLS

Backend
C#, ASP.NET Core, REST API design and testing, JWT, role-based access control

Databases
SQL, SQL Server, SQLite/Drift, schema design, normalization, query optimization

Tools and practices
Git, Postman, Visual Studio, Agile collaboration

Additional experience
Python/FastAPI, Java, JavaScript/TypeScript, Flutter/Dart

SELECTED PROJECTS

Offline Mobile Attendance Management System
Final-year project
- Developed FastAPI backend services with FaceNet facial verification and proximity checks to help prevent proxy attendance.
- Designed the SQLite/Drift data layer and peer-to-peer sync architecture over Wi-Fi Direct for recording and reconciling attendance without internet access.
- Implemented session management and real-time validation; integrated backend services with a Flutter client.

Library Management System

- Built REST APIs for book cataloguing, registration, borrowing, and returns, with authentication and role-based access control.
- Designed normalized relational schemas, logged borrowing history and overdue penalties, and optimized book-search and availability queries.

ADDITIONAL QUALIFICATIONS

Graduate Membership (GMCPN) 07/2026
Computer Professionals Registration Council of Nigeria

New Horizons training 07/2026
SQL Fundamentals Database Administration Workshop Computer Security
Java
